README.md

NBA Highlights

A React web application where NBA highlights are fetched from a json file

To see the project:

- Clone/download it
- Use `npm install`
- Use `jsonserver --watch db.json --port 3004`

This application includes examples of major features of React including:

- ES6 syntax
- Templating string
- Destructuring assignment
- fetch API
- React Router
- Component-based architecture
- CSS Partials/imports
- React Slider on homepage masthead
- React CSS Transitions
- Validations message for subscription emails
- Save data to DB
- Poll to choose best teams

Features

- A user can see NBA highlights
- A user can see a list of NBA teams
- A user can search for his/her favorite team
- A user can see a team profile
- Validation message for subscription emails

README.md

MovieApp | Part Two

An app that allows users to discover popular and top rated movies.

Features

- On MainActivity, movies are displayed in a grid layout
- On MainActivity, the user can filter by popular, top rated or favorites

- On DetailActivity, the title, poster, release date, rating and synopsis are visible
- On DetailActivity, the trailers and reviews are visible
- On DetailActivity, the user can favorite a movie

WHAT IS CYBERSECURITY

AND WHY IS IT IMPORTANT?

CYBERSECURITY IS THE TECHNIQUES OF PROTECTING COMPUTERS, NETWORKS, PROGRAMS AND DATA FROM UNAUTHORISED ACCESS OR ATTACKS THAT ARE AIMED FOR EXPLOITATION

INVESTMENTS IN SECURITY MOVED FROM NICE TO HAVE TO MUST HAVE

OCT 2016. A SERIES OF DDOS ATTACKS WERE LAUNCHED AGAINST DNS SERVERS, WHICH CAUSED MAJOR WEB SERVICES TO STOP WORKING (GITHUB, SPOTIFY, PAYPAL, TWITTER...)

Ooops, your files have been encrypted!

English

Payment will be raised on

1/4/1970 00:00:00

Time Left

00:00:00:00

Your files will be lost on

1/8/1970 00:00:00

Time Left

00:00:00:00

not so enough time.
You can decrypt some of your files for free. Try now by clicking <Decrypt>.
But if you want to decrypt all your files, you need to pay.
You only have 3 days to submit the payment. After that the price will be doubled.
Also, if you don't pay in 7 days, you won't be able to recover your files forever.
We will have free events for users who are so poor that they couldn't pay in 6 months.

How Do I Pay?

Payment is accepted in Bitcoin only. For more information, click <About bitcoin>.
Please check the current price of Bitcoin and buy some bitcoins. For more information, click <How to buy bitcoins>.
And send the correct amount to the address specified in this window.
After your payment, click <Check Payment>. Best time to check: 9:00am - 11:00am GMT from Monday to Friday.
Once the payment is checked, you can start decrypting your files immediately.

Contact

If you need our assistance, send a message by clicking <Contact Us>.

We strongly recommend you to not remove this software, and disable your anti-virus for a while, until you pay and the payment gets processed. If your anti-virus gets updated and removes this software automatically, it will not be able to recover your files even if you pay!

re: "[redacted]" Inbox ×

Dirk Saunders <yxpnmjarrettlwq@outlook.com> 12:07 PM (8 minutes ago)

to me

I know, [redacted], is your pass word. you may not know me and you are most likely thinking why you're getting this e-mail, correct?

Well, I installed a malware on the adult video clips (pornography) and you know what, you visited this web site to have fun (you know what I mean). When you were watching video clips, your browser started operating as a Rdp (Remote desktop) that has a key logger which gave me accessibility to your screen and also cam. Just after that, my software program gathered every one of your contacts from messenger, social networks, as well as email.

What exactly did I do?
I created a double-screen video. First part displays the video you were watching (you've got a good taste lol), and 2nd part displays the recording of your web cam.

Exactly what should you do?
Well, I believe, $1200 is a fair price for our little secret. You'll make the payment through Bitcoin (if you don't know this, search "how to buy bitcoin" in google).

BTC ADDRESS: 1JC99fcQMVR4iHdmf3GbHLGHMkPpyFjBu7
(It's CASE sensitive, so copy and paste it carefully)

Note:
You have one day to make the payment. (I've a specific pixel in this message, and right now I know that you've read this e mail). If I do not receive the Bitcoins, I will certainly send out your video recording to all of your contacts including friends and family, colleagues, and so forth. nonetheless, if I receive the payment, I'll destroy the video immediately. If you need proof, reply with "yes!" and I definitely will send your video recording to your 14 friends. It is a non-negotiable one time offer, thus don't ruin my time & yours by responding to this e-mail.

EventStream

Streams are node's best and most misunderstood idea, and EventStream is a toolkit to make creating and working with streams easy.

Normally, streams are only used for IO, but in event stream we send all kinds of objects down the pipe. If your application's input and output are streams, shouldn't the throughput be a stream too?

The *EventStream* functions resemble the array functions, because Streams are like Arrays, but laid out in time, rather than in memory.

All the `event-stream` functions return instances of `Stream`.

`event-stream` creates 0.8 streams, which are compatible with 0.10 streams.

> NOTE: I shall use the term *"through stream"* to refer to a stream that is writable *and* readable.

> NOTE for Gulp users: Merge will not work for gulp 4. merge-stream should be used.

simple example:

```
//pretty.js

if(!module.parent) {
  var es = require('event-stream')
```

install

```
> npm i event-stream
```

devinus commented on Jul 31, 2015

@dominictarr Interesting. Would you accept a `flatMap` patch using this functionality?

devinus commented on Jul 31, 2015

I wonder why `mapSync` uses `emit` rather than `queue`.

dominictarr commented on Jul 31, 2015 Owner

@devinus ah, it's probably just old. I don't use this module anymore, i now use https://github.com/dominictarr/pull-stream

If you publish a flatMap module and then make a pr to include it, i'll merge.

This repository has been archived by the owner. It is now read-only.

OWASP PRO ACTIVE CONTROLS

- List of security techniques that should be included in every software development project
- Ordered by order of importance

THE TOP 10 PROACTIVE CONTROLS

C1: Define Security Requirements

C2: Leverage Security Frameworks and Libraries

C3: Secure Database Access

C4: Encode and Escape Data

C5: Validate All Inputs

C6: Implement Digital Identity

C7: Enforce Access Controls

C8: Protect Data Everywhere

C9: Implement Security Logging and Monitoring

C10: Handle All Errors and Exceptions

C1. DEFINE SECURITY REQUIREMENTS

- Security requirements define new features or additions to existing features to solve a specific security problem or eliminate a potential vulnerability
- Instead of creating a custom approach to security for every application, standard security requirements allow developers to reuse the definition of security controls and best practices
- OWASP ASVS
- User Stories and Abuse Cases

A2:2017-Broken Authentication

Epic:

Attackers have access to hundreds of millions of valid username and password combinations for credential stuffing, default administrative account lists, automated brute force, and dictionary attack tools. Session management attacks are well understood, particularly in relation to unexpired session tokens.

Abuse Case:

As an attacker, I have access to hundreds of millions of valid username and password combinations for credential stuffing.

Abuse Case:

As an attacker, I have default administrative account lists, automated brute force, and dictionary attack tools I use against login areas of the application and support systems.

Abuse Case:

As an attacker, I manipulate session tokens using expired and fake tokens to gain access.

C2. LEVERAGE SECURITY FRAMEWORKS AND LIBRARIES

- Secure coding libraries and software frameworks with embedded security help software developers guard against security-related design and implementation flaws
- A developer writing an application from scratch might not have sufficient knowledge, time, or budget to properly implement or maintain security features

react

16.8.4 • Public • Published 8 days ago

Readme | 4 Dependencies | 36,582 Dependents | 194 Versions

react

React is a JavaScript library for creating user interfaces.

The `react` package contains only the functionality necessary to define React components. It is typically used together with a React renderer like `react-dom` for the web, or `react-native` for the native environments.

Note: by default, React will be in development mode. The development version includes extra warnings about common mistakes, whereas the production version includes extra performance optimizations and strips all error messages. Don't forget to use the production build when deploying your application.

Example Usage

```
var React = require('react');
```

Keywords

react

install

```
> npm i react
```

WHAT ARE APPLICATION SECURITY RISKS?

ATTACKERS CAN USE MANY DIFFERENT PATHS THROUGH YOUR APPLICATION TO DO HARM TO YOUR BUSINESS OR ORGANISATION

ASVS

- Provides developers with a list of requirements for secure development
- Authentication, session management, access control, cryptography, API, web services, business logic

V1. ARCHITECTURE, DESIGN & THREAT MODELLING REQUIREMENTS

V1.1 Secure Software Development Lifecycle Requirements

#	Description	L1	L2	L3	CWE
1.1.1	Verify the use of a secure software development lifecycle that addresses security in all stages of development. (C1)		✓	✓	
1.1.2	Verify the use of threat modeling for every design change or sprint planning to identify threats, plan for countermeasures, facilitate appropriate risk responses, and guide security testing.		✓	✓	1053
1.1.3	Verify that all user stories and features contain functional security constraints, such as "As a user, I should be able to view and edit my profile. I should not be able to view or edit anyone else's profile"		✓	✓	1110
1.1.4	Verify documentation and justification of all the application's trust boundaries, components, and significant data flows.		✓	✓	1059
1.1.5	Verify definition and security analysis of the application's high-level architecture and all connected remote services. (C1)		✓	✓	1059
1.1.6	Verify implementation of centralized, simple (economy of design), vetted, secure, and reusable security controls to avoid duplicate, missing, ineffective, or insecure controls. (C10)		✓	✓	637
1.1.7	Verify availability of a secure coding checklist, security requirements, guideline, or policy to all developers and testers.		✓	✓	637

WHAT'S NEXT FOR YOU?

BECOME A SECURITY CHAMPION!

Security Champions playbook

Identify teams

- Enumerate products and services
- List teams per each product
- Identify Product manager (responsible for product) and team manager (working directly with developers)
- Write down technologies (programming languages) used by each team

Define the role

- Measure current security state among the teams and define security goals you plan to achieve in mid-term (e.g. by using OWASP SAMM)
- Identify the places where champions could help (such as verifying security reviews, raising issues for risks in existing code, conducting automated scans etc.)
- Write down clearly defined roles, as these will be the primary tasks for newly nominated champions to work on

Nominate champions

- Introduce the idea and role descriptions and get approvals on all levels - both from product and engineering managers, as well as from top management
- Together with team leader identify potentially interested candidates
- Officially nominate them as part of your security meta-team

Comm channels

- Make sure to have an easy way to spread information and get feedback
- While differing from company to company, this usually includes chats (Slack/IRC channel, Yammer group, ...) and separate mailing lists
- Set up periodic sync ups - bi-weelky should be fine to start with

Knowledge base

- Build a solid internal security knowledge base, which would become the main source of inspiration for the champions
- It should include security meta-team page with defined roles, secure development best practices, descriptions of risks and vulnerabilities and any other relevant info
- Pay special attention to clear and easy-to-follow checklists, as it's usually the simplest way to get the things going

Maintain interest

- Develop your ways or choose one of the below to keep in touch and maintain the interest of the champions
- Conduct periodic workshops and encourage participation in security conferences
- Share recent appsec news (e.g. Ezine) via communication channels
- Send internal monthly security newsletters with updates, plans and recognitions for the good work
- Create champions corner with security library, conference calendar, and other interesting materials

KEEP CHALLENGING YOURSELVES

KEEP WORKING ON YOUR BRAND AND SKILLS

- Attends meet ups
- Get involved in the Tech community!
- Keep learning new things
- Soft skills are important!
- Be positive
- Sharing is caring :)
