WHAT IS CYBERSECURITY AND WHY IS IT IMPORTANT?

CYBERSECURITY IS THE TECHNIQUES OF
PROTECTING COMPUTERS, NETWORKS,
PROGRAMS AND DATA FROM
UNAUTHORISED ACCESS OR ATTACKS
THAT ARE AIMED FOR EXPLOITATION

INVESTMENTS IN SECURITY
MOVED FROM NICE TO
HAVE TO MUST HAVE

OCT 2016.
A SERIES OF DDOS ATTACKS WERE
LAUNCHED AGAINST DNS SERVERS, WHICH
CAUSED MAJOR WEB SERVICES TO STOP
WORKING (GITHUB, SPOTIFY, PAYPAL,
TWITTER...)

No server is currently available to service your request.

Sorry about that. Please try refreshing and contact us if the problem
persists.

Ooops, your files have been encrypted!

English

not so enough time.

You can decrypt some of your files for free. Try now by clicking <Decrypt>.

But if you want to decrypt all your files, you need to pay.

You only have 3 days to submit the payment. After that the price will be doubled.

Also, if you don't pay in 7 days, you won't be able to recover your files forever.

We will have free events for users who are so poor that they couldn't pay in 6 months.

Payment will be raised on

1/4/1970 00:00:00

Time Left

00:00:00:00

Your files will be lost on

1/8/1970 00:00:00

Time Left

00:00:00:00

[About bitcoin](#)

[How to buy bitcoins?](#)

[Contact Us](#)

How Do I Pay?

Payment is accepted in Bitcoin only. For more information, click <About bitcoin>.

Please check the current price of Bitcoin and buy some bitcoins. For more information, click <How to buy bitcoins>.

And send the correct amount to the address specified in this window.

After your payment, click <Check Payment>. Best time to check: 9:00am - 11:00am GMT from Monday to Friday.

Once the payment is checked, you can start decrypting your files immediately.

Contact

If you need our assistance, send a message by clicking <Contact Us>.

We strongly recommend you to not remove this software, and disable your anti-virus for a while, until you pay and the payment gets processed. If your anti-virus gets updated and removes this software automatically, it will not be able to recover your files even if you pay!

Send \$600 worth of bitcoin to this address:

re: "[REDACTED]" ➤

Inbox X

Dirk Saunders <xpnmjarrettlwq@outlook.com>

to me ▾

12:07 PM (8 minutes ago)

I know, [REDACTED], is your pass word. you may not know me and you are most likely thinking why you're getting this e-mail, correct?

Well, I installed a malware on the adult video clips (pornography) and you know what, you visited this web site to have fun (you know what I mean). When you were watching video clips, your browser started operating as a Rdp (Remote desktop) that has a key logger which gave me accessibility to your screen and also cam. Just after that, my software program gathered every one of your contacts from messenger, social networks, as well as email.

What exactly did I do?

I created a double-screen video. First part displays the video you were watching (you've got a good taste lol), and 2nd part displays the recording of your web cam.

Exactly what should you do?

Well, I believe, \$1200 is a fair price for our little secret. You'll make the payment through Bitcoin (if you don't know this, search "how to buy bitcoin" in google).

BTC ADDRESS: 1JC99fcQMVR4iHdmf3GbHLGHMkPpyFjBu7

(It's CASE sensitive, so copy and paste it carefully)

Note:

You have one day to make the payment. (I've a specific pixel in this message, and right now I know that you've read this e mail). If I do not receive the Bitcoins, I will certainly send out your video recording to all of your contacts including friends and family, colleagues, and so forth. nonetheless, if I receive the payment, I'll destroy the video immediately. If you need proof, reply with "yes!" and I definitely will send your video recording to your 14 friends. It is a non-negotiable one time offer, thus don't ruin my time & yours by responding to this e-mail.

event-stream

4.0.1 · Public · Published 7 months ago

[Readme](#)[7 Dependencies](#)[1,638 Dependents](#)[84 Versions](#)

EventStream

Streams are node's best and most misunderstood idea, and EventStream is a toolkit to make creating and working with streams easy.

Normally, streams are only used for IO, but in event stream we send all kinds of objects down the pipe. If your application's input and output are streams, shouldn't the throughput be a stream too?

The *EventStream* functions resemble the array functions, because Streams are like Arrays, but laid out in time, rather than in memory.

All the `event-stream` functions return instances of `Stream`.

`event-stream` creates [0.8 streams](#), which are compatible with [0.10 streams](#).

NOTE: I shall use the term "*through stream*" to refer to a stream that is writable *and* readable.

NOTE for Gulp users: Merge will not work for gulp 4. [merge-stream](#) should be used.

simple example:

```
//pretty.js

if(!module.parent) {
  var es = require('event-stream')
```

install

```
> npm i event-stream
```

SOCIAL ENGINEERING DEVS

devinus commented on Jul 31, 2015

...

@dominictarr Interesting. Would you accept a `flatMap` patch using this functionality?

devinus commented on Jul 31, 2015

...

I wonder why `mapSync` uses `emit` rather than `queue`.

dominictarr commented on Jul 31, 2015

Owner

...

@devinus ah, it's probably just old. I don't use this module anymore, i now use
<https://github.com/dominictarr/pull-stream>

If you publish a `flatMap` module and then make a pr to include it, i'll merge.

This repository has been archived by the owner. It is now read-only.

WEB APPLICATION SECURITY

“Web application security is a branch of Information Security that deals specifically with security of websites, web applications and web services.”

-WIKIPEDIA

SECURE SOFTWARE DEVELOPMENT LIFE CYCLE

Software Development Life Cycle (SDLC) is a framework that defines the process used by the organisations to build an application from its inception to its decommission

A SECURE SDLC PROCESS ENSURES THAT SECURITY ASSURANCE ACTIVITIES SUCH AS PENETRATION TESTING, CODE REVIEW, AND ARCHITECTURE ANALYSIS ARE AN INTEGRAL PART OF THE DEVELOPMENT EFFORT

- .MORE SECURE SOFTWARE AS SECURITY IS A CONTINUOUS CONCERN
- .AWARENESS OF SECURITY CONSIDERATIONS BY STAKEHOLDERS
- .EARLY DETECTION OF FLAWS & COST REDUCTION AS A RESULT OF EARLY DETECTION AND RESOLUTION OF ISSUES

HOW DO I GET STARTED?

OWASP

- Open Web Application Security Project
- Community dedicated to enabling organisations to conceive, develop, acquire, operate and maintain applications that can be trusted

OWASP PRO ACTIVE CONTROLS

- List of security techniques that should be included in every software development project
- Ordered by order of importance

10 Critical Security Areas That Software Developers Must Be Aware Of

PROJECT LEADERS

KATY ANTON
JIM MANICO
JIM BIRD

THE TOP 10 PROACTIVE CONTROLS

- C1: Define Security Requirements
- C2: Leverage Security Frameworks and Libraries
- C3: Secure Database Access
- C4: Encode and Escape Data
- C5: Validate All Inputs
- C6: Implement Digital Identity
- C7: Enforce Access Controls
- C8: Protect Data Everywhere
- C9: Implement Security Logging and Monitoring
- C10: Handle All Errors and Exceptions

C1. DEFINE SECURITY REQUIREMENTS

- Security requirements define new features or additions to existing features to solve a specific security problem or eliminate a potential vulnerability
- Instead of creating a custom approach to security for every application, standard security requirements allow developers to reuse the definition of security controls and best practices
- OWASP ASVS
- User Stories and Abuse Cases

A2:2017-Broken Authentication

Epic:

Attackers have access to hundreds of millions of valid username and password combinations for credential stuffing, default administrative account lists, automated brute force, and dictionary attack tools. Session management attacks are well understood, particularly in relation to unexpired session tokens.

Abuse Case:

As an attacker, I have access to hundreds of millions of valid username and password combinations for credential stuffing.

Abuse Case:

As an attacker, I have default administrative account lists, automated brute force, and dictionary attack tools I use against login areas of the application and support systems.

Abuse Case:

As an attacker, I manipulate session tokens using expired and fake tokens to gain access.

C2. LEVERAGE SECURITY FRAMEWORKS AND LIBRARIES

- Secure coding libraries and software frameworks with embedded security help software developers guard against security-related design and implementation flaws
- A developer writing an application from scratch might not have sufficient knowledge, time, or budget to properly implement or maintain security features

194 Versions

react

React is a JavaScript library for creating user interfaces.

The `react` package contains only the functionality necessary to define React components. It is typically used together with a React renderer like `react-dom` for the web, or `react-native` for the native environments.

Note: by default, React will be in development mode. The development version includes extra warnings about common mistakes, whereas the production version includes extra performance optimizations and strips all error messages. Don't forget to use the [production build](#) when deploying your application.

Example Usage

```
var React = require('react');
```

Keywords

react

install

```
> npm i react
```

IMPLEMENTING BEST PRACTICES

- Use libraries and frameworks from trusted sources that are actively maintained and widely used by many applications
- Create and maintain an inventory catalog of all the third party libraries and components
- Proactively keep libraries and components up to date

OWASP TOP 10-2017

- The primary aim is to educate developers, designers, architects, managers, and organisations about the consequences of the most common and most important web app security weaknesses

OWASP Top 10 - 2017

The Ten Most Critical Web Application Security Risks

WHAT CHANGED FROM 2013 TO 2017?

OWASP TOP 10

OWASP Top 10 - 2013	→	OWASP Top 10 - 2017
A1 – Injection	→	A1:2017-Injection
A2 – Broken Authentication and Session Management	→	A2:2017-Broken Authentication
A3 – Cross-Site Scripting (XSS)	➔	A3:2017-Sensitive Data Exposure
A4 – Insecure Direct Object References [Merged+A7]	↳	A4:2017-XML External Entities (XXE) [NEW]
A5 – Security Misconfiguration	➔	A5:2017-Broken Access Control [Merged]
A6 – Sensitive Data Exposure	↗	A6:2017-Security Misconfiguration
A7 – Missing Function Level Access Contr [Merged+A4]	↳	A7:2017-Cross-Site Scripting (XSS)
A8 – Cross-Site Request Forgery (CSRF)	☒	A8:2017-Insecure Deserialization [NEW, Community]
A9 – Using Components with Known Vulnerabilities	→	A9:2017-Using Components with Known Vulnerabilities
A10 – Unvalidated Redirects and Forwards	☒	A10:2017-Insufficient Logging&Monitoring [NEW,Comm.]

WHAT ARE APPLICATION SECURITY RISKS?

ATTACKERS CAN USE MANY DIFFERENT PATHS THROUGH YOUR APPLICATION TO DO HARM TO YOUR BUSINESS OR ORGANISATION

ASVS

OWASP

Application Security Verification Standard 4.0

Final

March 2019

- Provides developers with a list of requirements for secure development
- Authentication, session management, access control, cryptography, API, web services, business logic

V1. ARCHITECTURE, DESIGN & THREAT MODELLING REQUIREMENTS

V1.1 Secure Software Development Lifecycle Requirements

#	Description	L1	L2	L3	CWE
1.1.1	Verify the use of a secure software development lifecycle that addresses security in all stages of development. (C1)		✓	✓	
1.1.2	Verify the use of threat modeling for every design change or sprint planning to identify threats, plan for countermeasures, facilitate appropriate risk responses, and guide security testing.		✓	✓	1053
1.1.3	Verify that all user stories and features contain functional security constraints, such as "As a user, I should be able to view and edit my profile. I should not be able to view or edit anyone else's profile"		✓	✓	1110
1.1.4	Verify documentation and justification of all the application's trust boundaries, components, and significant data flows.		✓	✓	1059
1.1.5	Verify definition and security analysis of the application's high-level architecture and all connected remote services. (C1)		✓	✓	1059
1.1.6	Verify implementation of centralized, simple (economy of design), vetted, secure, and reusable security controls to avoid duplicate, missing, ineffective, or insecure controls. (C10)		✓	✓	637
1.1.7	Verify availability of a secure coding checklist, security requirements, guideline, or policy to all developers and testers.		✓	✓	637

Code quality

Automate your code review with style, quality, security, and test-coverage checks when you need them.

22 results filtered by Code quality X

codelingo ?

Your Code, Your Rules - Automate code reviews with your own best practices

codebeat ✓

Code review expert on demand. Automated for mobile and web

TestQuality ✓

Modern, powerful, test plan management

Sider ✓

Automatically analyze pull request against custom per-project rulesets and best practices

Restyled.io ?

Restyle Pull Requests as they're opened

Pull Request Size ?

Apply size labels to Pull Requests based on the total lines of code changed

PEP 8 Speaks ?

A GitHub app to automatically review Python code style over Pull Requests

Lucidchart Connector ✓

Insert a public link to a Lucidchart diagram so team members can quickly understand an issue or pull request

LGTM ✓

Find and prevent zero-days and other critical bugs, with customizable alerts and automated code review

ImgBot ✓

A GitHub app that optimizes your images

GuardRails ?

GuardRails provides continuous security feedback for modern development teams

GraphQL Inspector ?

Compare schemas, validate documents, find breaking changes, find similar types, get schema coverage

Datree ?

Policy enforcement solution for confident and compliant code

Coveralls ✓

Ensure that new code is fully covered, and see coverage trends emerge. Works with any CI service

Commit Lint ?

Enforce the conventions of commits

Codecov ✓

Group, merge, archive and compare coverage reports

CodeScene ✓

The analysis tool to identify and prioritize technical debt and evaluate your organizational efficiency

CodeFactor ✓

Automated code review for GitHub

Code Climate ✓

Automated code review for technical debt and test coverage

Codacy ✓

Automated code reviews to help developers ship better software, faster

AccessLint brings automated web accessibility testing into your development workflow. When a pull request is opened, AccessLint reviews the changes and comments with any new accessibility issues, giving you quick, timely, and targeted feedback, before code goes live.

AccessLint helps you keep on target with digital accessibility by giving specific, ongoing accessibility feedback to your team. It can catch simple errors that might break your website for your customers with disabilities.

Accessibility guidelines defined in WCAG 2.0 help us build applications that work better for more people. They also give us a rough measure of compliance with legal requirements outlined in the ADA and Section 508. AccessLint runs a growing list of WCAG 2.0 tests, e.g. missing alt attributes that make pages more opaque for screenreader users, positive tabindex values that can create confusion for keyboard users, invalid ARIA, and unlabelled fields.

Use AccessLint to hold on to the hard-earned progress you've made with accessibility, or to inspire your team to start chipping away at issues. That frees you from costly bug-fixes and remediation, and socializes accessibility to your team. That way you'll have fewer bugs and can focus on delivering features.

When you open a Pull Request, AccessLint works quickly to find accessibility issues in your code, and comments with specific, line-by-line feedback.

There are accessibility issues in these changes.

src/components/imageBanner/_spec.js Outdated

Hide resolved

```
21  20      const wrapper = shallow(<ImageBanner />)
22  21      expect(wrapper.find(BannerSubtitle)).toHaveLength(1)
23  22    })
24  23
25 -  it('should render an <img> if passed an imageSrc prop', () => {
24 +  it('renders an <img> if passed an imageSrc prop', () => {
```

accesslint bot 23 days ago

This image is missing a text alternative (`alt` attribute). This is a problem for people using screen readers.

Codacy is an automated code analysis/quality tool that helps developers ship better software, faster. With Codacy, you get static analysis, cyclomatic complexity, duplication and code unit test coverage changes in every commit and pull request.

You can use Codacy to enforce your code quality standard, save time in code reviews, enforce security best practices and onboard developers faster. Integrate with your GitHub repositories to get quality analysis of every pull request inside GitHub.

[Read more...](#)

The dashboard displays a chart titled "Project Grade" showing the evolution of code quality over time. The Y-axis represents the rank of the project's code quality, ranging from 1 to 100. The X-axis shows dates from April 17 to April 27. A green line graph tracks the project's grade, which starts at 12%, dips slightly, then rises sharply to 10% by April 27. To the right of the chart, there are sections for "Dependencies", "Security", "Build Status", "Code Size", "Compatibility", and "Unused code".

The screenshot shows a GitHub pull request interface with Codacy integration. It displays several comments from the "codacy-bot" pointing out code issues such as "Avoid multiple fields" and "Some checks were not successful". Below the pull request, there are five small screenshots of Codacy's analysis interface, showing various code review and analysis tools.

Integrated in your workflow

Get only the updates you need. Integrate comments and status on your pull requests and know exactly what's wrong and where.

Displayed by default? Yes. Alerts for this query are visible by default, but can be hidden on a per-project basis. [Learn how.](#)

React component state updates using `setState` may asynchronously update `this.props` and `this.state`, thus it is not safe to use either of the two when calculating the new state passed to `setState`.

Recommendation

Use the callback-based variant of `setState`: instead of calculating the new state directly and passing it to `setState`, pass a callback function that calculates the new state when the update is about to be performed.

Example

The following example uses `setState` to update the `counter` property of `this.state`, relying on the current (potentially stale) value of that property:

```
1  this.setState({  
2    counter: this.state.counter + 1  
3  });
```

Instead, the callback form of `setState` should be used:

```
1  this.setState(prevState => ({  
2    counter: prevState.counter + 1  
3  }));
```

References

- [React Quick Start: State and Lifecycle](#).

State and Lifecycle

This page introduces the concept of state and lifecycle in a React component.
You can find a [detailed component API reference here](#).

Consider the ticking clock example from [one of the previous sections](#). In [Rendering Elements](#), we have only learned one way to update the UI. We call `ReactDOM.render()` to change the rendered output:

```
function tick() {
  const element = (
    <div>
      <h1>Hello, world!</h1>
      <h2>It is {new Date().toLocaleTimeString()}</h2>
    </div>
  );
  ReactDOM.render(
    element,
    document.getElementById('root')
  );
}

setInterval(tick, 1000);
```

[Try it on CodePen](#)

In this section, we will learn how to make the `Clock` component truly reusable and encapsulated. It will set up its own timer and update itself every second.

sonatype-depshield bot opened this issue a day ago · 0 comments

sonatype-deps... bot commented a day ago

+ ...

Vulnerabilities

DepShield reports that this application's usage of [lodash.get:4.4.2](#) results in the following vulnerability(s):

- (CVSS 7.4) [CWE-471: Modification of Assumed-Immutable Data \(MAID\)](#)
- (CVSS 6.5) [\[CVE-2018-3721\] lodash node module before 4.17.5 suffers from a Modification of Assumed-Immutabl...](#)

Occurrences

lodash.get:4.4.2 is a transitive dependency introduced by the following direct dependency(s):

- [husky:1.3.1](#)
 - └ [cosmiconfig:5.1.0](#)
 - └ [lodash.get:4.4.2](#)

This is an automated GitHub Issue created by Sonatype DepShield. Details on managing GitHub Apps, including DepShield, are available for [personal](#) and [organization](#) accounts. Please submit questions or feedback about DepShield to the [Sonatype DepShield Community](#).

⌚ Vulnerability

CWE-471: Modification of Assumed-Immutable Data (MAID)

The software does not properly protect an assumed-immutable element from being modified by an attacker.

severity low

Prototype Pollution

lodash

[Advisory](#) [Versions](#)

Overview

Versions of `lodash` before 4.17.5 are vulnerable to prototype pollution.

The vulnerable functions are '`defaultsDeep`', '`merge`', and '`mergeWith`' which allow a malicious user to modify the prototype of `Object` via `__proto__` causing the addition or modification of an existing property that will exist on all objects.

Remediation

Update to version 4.17.5 or later.

[Snyk](#) is on a mission to help developers use open source and stay secure.

Snyk helps find, fix (and prevent!) known vulnerabilities in your Node.js, Java, Ruby, Python and Scala apps. Snyk is free for open source.

Snyk tracks vulnerabilities in over 800,000 open source packages, and helps protect over 25,000 applications.

83% of Snyk users found vulnerabilities in their applications, and new vulnerabilities are disclosed regularly, putting your application at risk.

[Read more...](#)

The screenshot shows the Snyk dashboard interface. At the top, there's a navigation bar with 'snyk Canidae Ltd' and dropdown menus for 'Vulnerability DB', 'Docs', and 'My account'. Below the navigation is a search bar labeled 'Search projects' and a button 'Add projects'. Underneath, there are filters for 'GitHub' (7), 'CI/CLI' (2), and 'Bitbucket' (2), along with dropdowns for 'Languages' and 'Sort'. The main area displays five projects:

- canidae/pug**: Includes 'package.json' with 5 H, 2 M, 14 L vulnerabilities, and 'Gemfile.lock' with 4 H, 1 M, 1 L vulnerabilities. Both were tested weekly 1 hour ago.
- flat-coated-retriver**: Includes 'package.json' with 0 L, 0 M, 0 L vulnerabilities. It was tested weekly 3 days ago.
- canidae/pyrenean-shepherd**: Includes 'pom.xml' with 1 H, 0 M, 1 L vulnerabilities. It was tested weekly 5 days ago.
- canidae/anatolian-shepherd**: Includes 'Gemfile.lock' with 2 H, 1 M, 7 L vulnerabilities. It was tested weekly 1 week ago.
- canidae/saint-bernard**: No details shown.

Below the projects, a call-to-action says 'Find: Quickly scan all your repos and get a high level overview on the amount of known vulnerabilities'. At the bottom, there are four small screenshots of different Snyk features: 'Dependency Management', 'Dependency Graph', 'Dependency Audit', and 'Dependency Advisor'.

MEDIUM SEVERITY

🛡 Denial of Service (DoS)

Vulnerable module: [mem](#)

Introduced through: [gatsby@2.1.31](#)

Detailed paths and remediation

- Introduced through: pride-london-web@0.1.0 > gatsby@2.1.31 > @gatsbyjs/relay-compiler@2.0.0-primer-fix.2 > yargs@9.0.1 > os-locale@2.1.0 > mem@1.1.0

Remediation: No remediation path available.

Vulnerable functions

`index.module.exports.memoized()`

`index.module.exports.memoized.setData()`

Overview

[mem](#) is an optimization used to speed up consecutive function calls by caching the result of calls with identical input.

Affected versions of this package are vulnerable to Denial of Service (DoS). Old results were deleted from the cache and could cause a memory leak.

[Rollbar](#) provides real-time, full-stack exception reporting and debugging tools for developers.

Rollbar integrates in moments with apps built in **JavaScript, Ruby, Python, PHP, Node.js, Android, iOS, Go, Java, .NET and more**.

Rollbar integrates with GitHub to link stack traces to the underlying source code, correlate exceptions to code changes, and create GitHub issues so teams can manage errors in their existing workflow.

We must measure before we can adapt.

Ensure that Pull Request sizes in your organization are trending smaller with the Pull Request Size app. Each Pull Request created will be marked with a label in GitHub based on the lines of code changed.

Size Determination

The Pull Request labels are applied depending on the total lines of code changed (additions + deletions).

Label	Description
size/XS	Denotes a Pull Request that changes 0-9 lines.
size/S	Denotes a Pull Request that changes 10-29 lines.
size/M	Denotes a Pull Request that changes 30-99 lines.
size/L	Denotes a Pull Request that changes 100-499 lines.
size/XL	Denotes a Pull Request that changes 500-999 lines.
size/XXL	Denotes a Pull Request that changes 1000+ lines.

Testing Pull Request Size App #5

Lighthouse

Lighthouse is an [open-source](#), automated tool for improving the quality of web pages. You can run it against any web page, public or requiring authentication. It has audits for performance, accessibility, progressive web apps, and more.

You can run Lighthouse in Chrome DevTools, from the command line, or as a Node module. You give Lighthouse a URL to audit, it runs a series of audits against the page, and then it generates a report on how well the page did. From there, use the failing audits as indicators on how to improve the page. Each audit has a reference doc explaining why the audit is important, as well as how to fix it.

[RUN LIGHTHOUSE IN CHROME DEVTOOLS](#) [FILE AN ISSUE](#)

Check out the video below from Google I/O 2017 to learn more about how to use and contribute to Lighthouse.

[Sommaire](#)[Get started](#)[Run Lighthouse in Chrome DevTools](#)[Install and run the Node command line tool](#)[Run Lighthouse as a Chrome Extension](#)[Share and view reports online](#)[Share reports as JSON](#)[Share reports as GitHub Gists](#)[Contribute to Lighthouse](#)

The screenshot displays a web browser window with two tabs open. The left tab shows the [Polymer Project Shop](https://shop.polymer-project.org) homepage, featuring a large image of a person's back wearing a textured jacket, a navigation bar with a menu icon, a "SHOP" button, and a shopping cart icon. Below the image is a "Men's Outerwear" section with a "SHOP NOW" button. The right tab shows the Lighthouse audit results for the same URL, dated 9/26/2017, at 4:59:10 P. The audit summary indicates 100% for Progressive Web App, 88% for Performance, 100% for Accessibility, and 85% for Best Practices. The audit details section for the Progressive Web App shows 0 failed audits, 11 passed audits, and manual checks to verify. The Performance section shows metrics across various dimensions.

WHAT'S NEXT FOR YOU?

BECOME A
SECURITY
CHAMPION!

Security Champions playbook

Identify teams

- Enumerate products and services
- List teams per each product
- Identify Product manager (responsible for product) and team manager (working directly with developers)
- Write down technologies (programming languages) used by each team

Define the role

- Measure current security state among the teams and define security goals you plan to achieve in mid-term (e.g. by using OWASP SAMM)
- Identify the places where champions could help (such as verifying security reviews, raising issues for risks in existing code, conducting automated scans etc.)
- Write down clearly defined roles, as these will be the primary tasks for newly nominated champions to work on

Nominate champions

- Introduce the idea and role descriptions and get approvals on all levels - both from product and engineering managers, as well as from top management
- Together with team leader identify potentially interested candidates
- Officially nominate them as part of your security meta-team

Comm channels

- Make sure to have an easy way to spread information and get feedback
- While differing from company to company, this usually includes chats (Slack/IRC channel, Yammer group, ...) and separate mailing lists
- Set up periodic sync ups - bi-weekly should be fine to start with

Knowledge base

- Build a solid internal security knowledge base, which would become the main source of inspiration for the champions
- It should include security meta-team page with defined roles, secure development best practices, descriptions of risks and vulnerabilities and any other relevant info
- Pay special attention to clear and easy-to-follow checklists, as it's usually the simplest way to get the things going

Maintain interest

- Develop your ways or choose one of the below to keep in touch and maintain the interest of the champions
- Conduct periodic workshops and encourage participation in security conferences
- Share recent appsec news (e.g. Ezine) via communication channels
- Send internal monthly security newsletters with updates, plans and recognitions for the good work
- Create champions corner with security library, conference calendar, and other interesting materials
