ENGINEER

WHAT IS CYBERSECURITY AND WHY IS IT IMPORTANT?

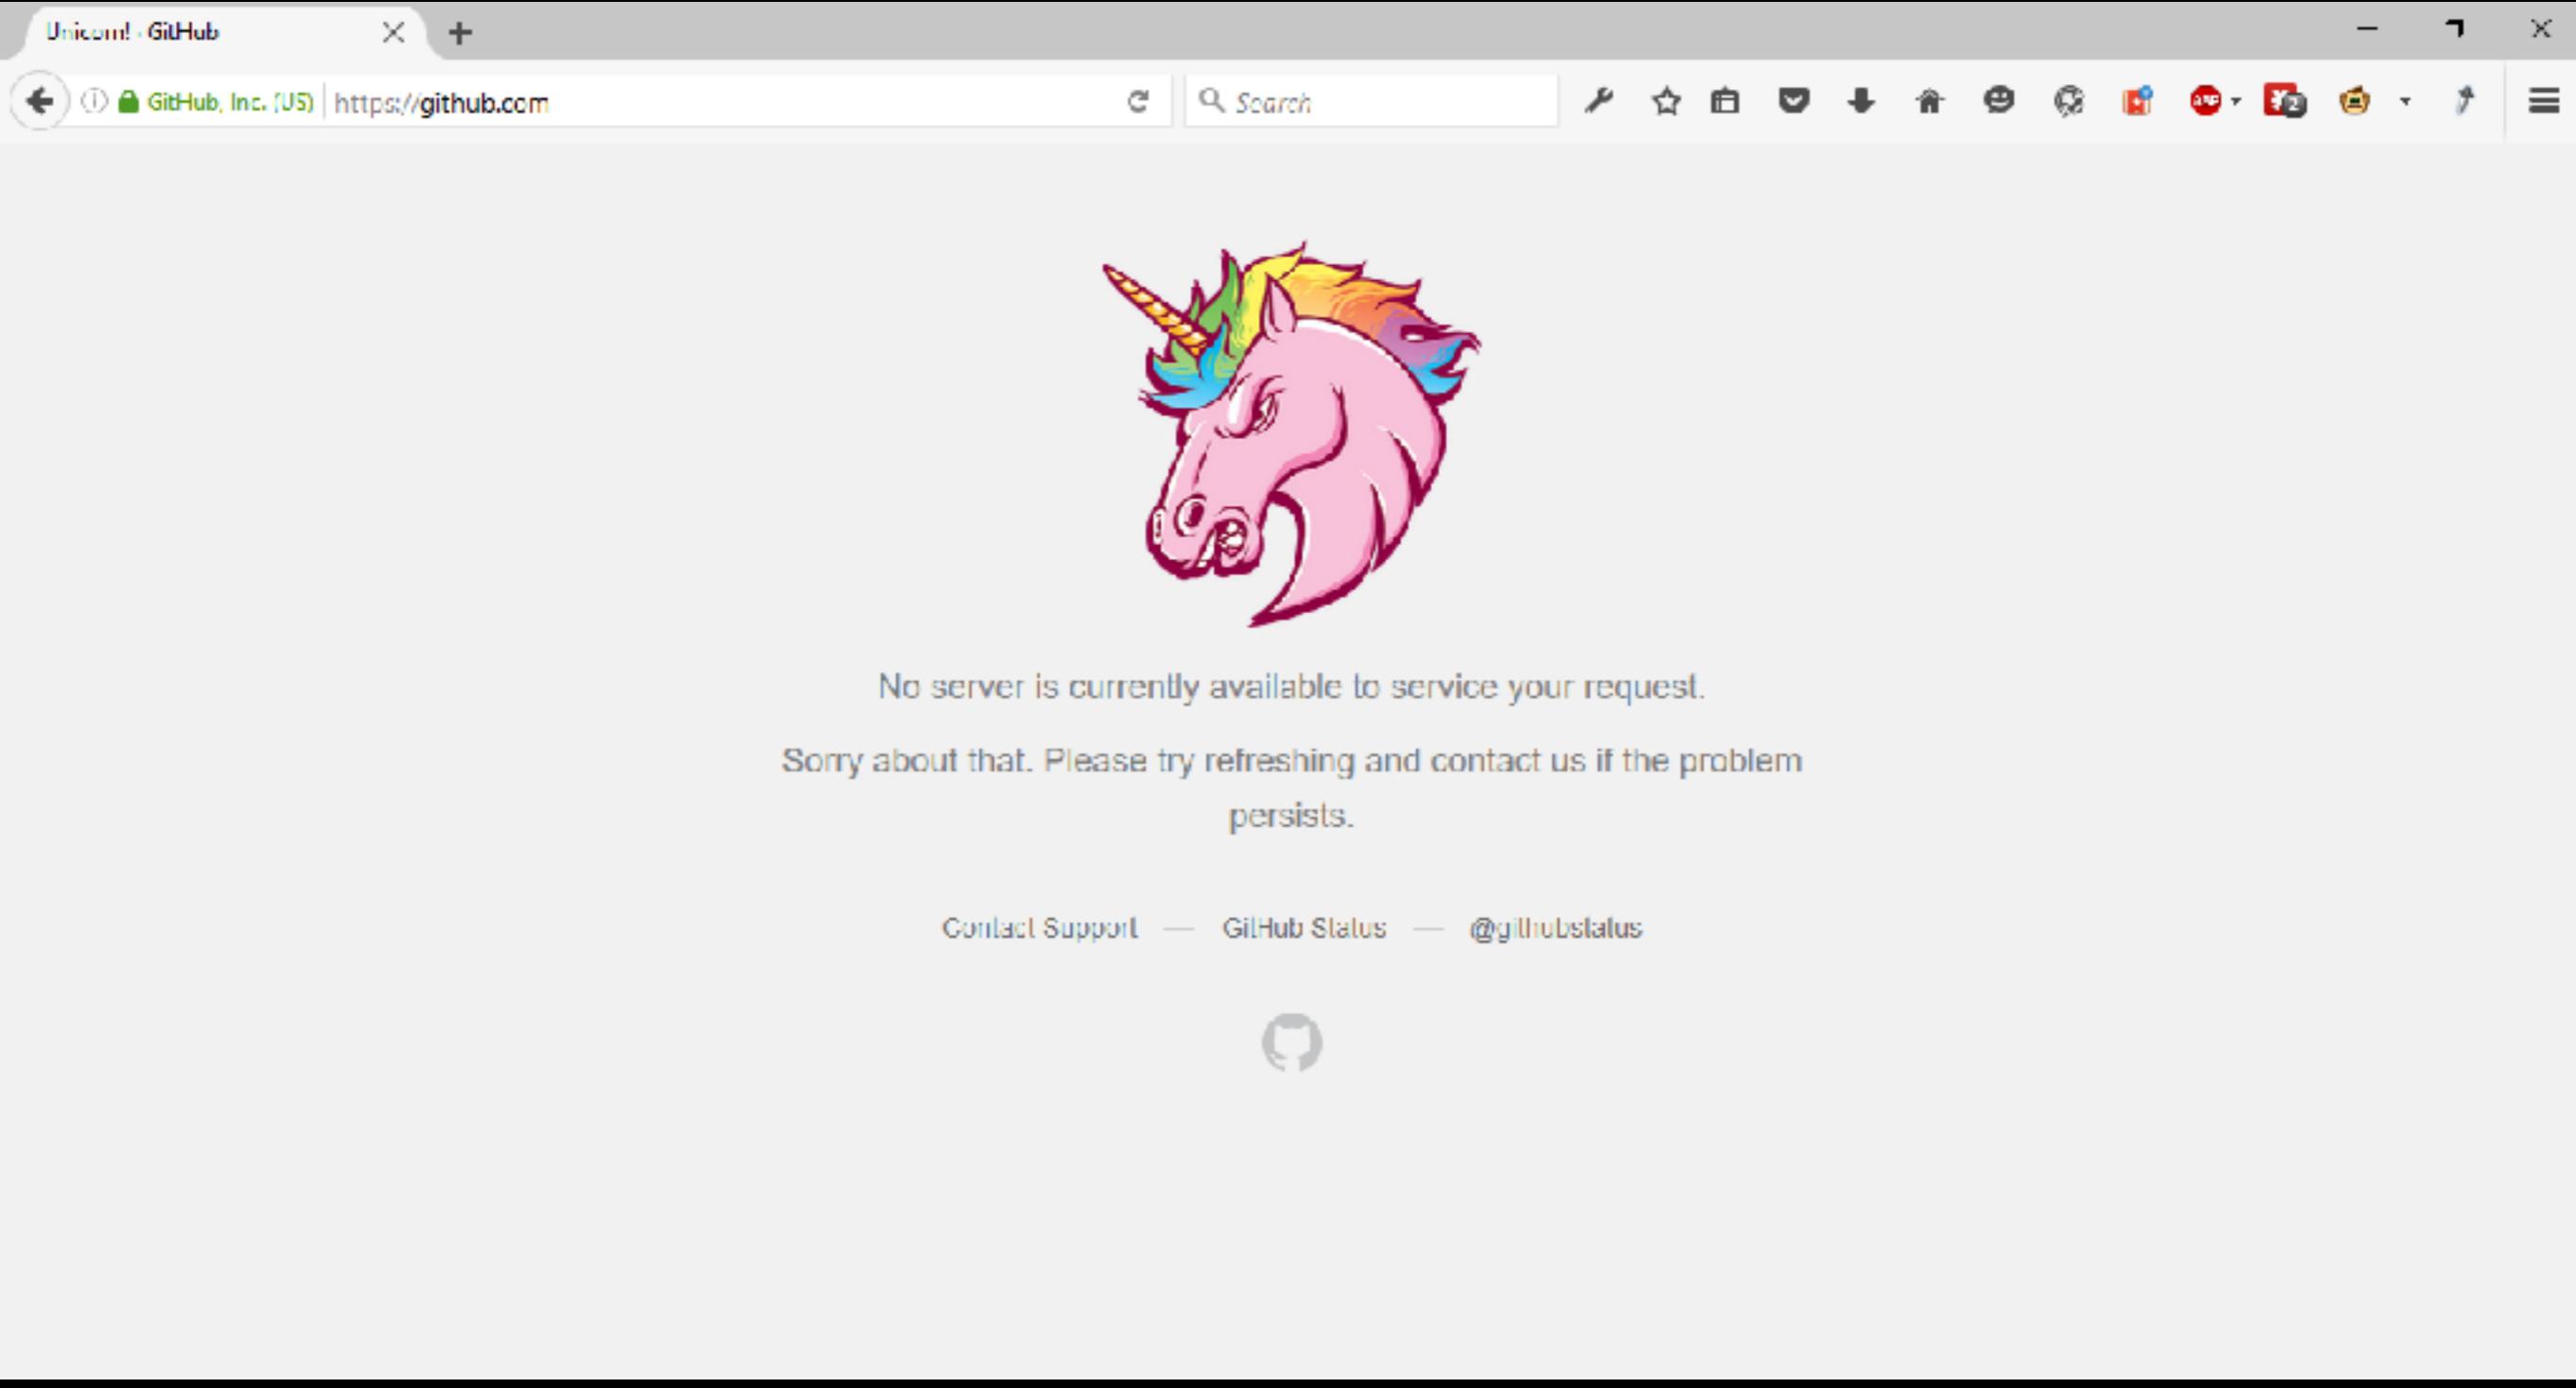

The word cloud is composed of various terms related to cybersecurity, including:

- Computer Design Protection
- Cyber Defects
- Secure Systems Assurance
- Software Engineering
- Hardware Control
- Vulnerabilities
- Common Networks
- Known Critical Cybercrime
- Connected Policy
- Government One
- Information Primary
- Operating System
- Defense Power Level
- International Compromised
- Computers Bill Protect
- House Services
- Well Loss
- Protecting
- Primary Management
- National Internet Order Provide
- Flaws
- Management
- Internet Order Provide
- Network United
- Code High Using Center
- Problem Ensure
- Security

CYBERSECURITY IS THE TECHNIQUES OF
PROTECTING COMPUTERS, NETWORKS,
PROGRAMS AND DATA FROM
UNAUTHORISED ACCESS OR ATTACKS
THAT ARE AIMED FOR EXPLOITATION

INVESTMENTS IN SECURITY
MOVED FROM NICE TO
HAVE TO MUST HAVE

OCT 2016.
A SERIES OF DDOS ATTACKS WERE
LAUNCHED AGAINST DNS SERVERS,
WHICH CAUSED MAJOR WEB SERVICES TO
STOP WORKING (GITHUB, SPOTIFY,
PAYPAL, TWITTER...)

No server is currently available to service your request.

Sorry about that. Please try refreshing and contact us if the problem persists.

<h1>...

Ooops, your files have been encrypted!

English

▼

not so enough time.

You can decrypt some of your files for free. Try now by clicking <Decrypt>.

But if you want to decrypt all your files, you need to pay.

You only have 3 days to submit the payment. After that the price will be doubled.

Also, if you don't pay in 7 days, you won't be able to recover your files forever.

We will have free events for users who are so poor that they couldn't pay in 6 months.

Payment will be raised on

1/4/1970 00:00:00

Time Left

00:00:00:00

Your files will be lost on

1/8/1970 00:00:00

Time Left

00:00:00:00

How Do I Pay?

Payment is accepted in Bitcoin only. For more information, click <About bitcoin>.

Please check the current price of Bitcoin and buy some bitcoins. For more information, click <How to buy bitcoins>.

And send the correct amount to the address specified in this window.

After your payment, click <Check Payment>. Best time to check: 9:00am - 11:00am GMT from Monday to Friday.

Once the payment is checked, you can start decrypting your files immediately.

Contact

If you need our assistance, send a message by clicking <Contact Us>.

We strongly recommend you to not remove this software, and disable your anti-virus for a while, until you pay and the payment gets processed. If your anti-virus gets updated and removes this software automatically, it will not be able to recover your files even if you pay!

Send \$600 worth of bitcoin to this address:

12:07 PM (8 minutes ago)

to me ▾

I know, ██████████, is your pass word. you may not know me and you are most likely thinking why you're getting this e-mail, correct?

Well, I installed a malware on the adult video clips (pornography) and you know what, you visited this web site to have fun (you know what I mean). When you were watching video clips, your browser started operating as a Rdp (Remote desktop) that has a key logger which gave me accessibility to your screen and also cam. Just after that, my software program gathered every one of your contacts from messenger, social networks, as well as email.

What exactly did I do?

I created a double-screen video. First part displays the video you were watching (you've got a good taste lol), and 2nd part displays the recording of your web cam.

Exactly what should you do?

Well, I believe, \$1200 is a fair price for our little secret. You'll make the payment through Bitcoin (if you don't know this, search "how to buy bitcoin" in google).

BTC ADDRESS: 1JC99fcQMVR4iHdmf3GbHLGHMkPpyFjBu7

(It's CASE sensitive, so copy and paste it carefully)

Note:

You have one day to make the payment. (I've a specific pixel in this message, and right now I know that you've read this e mail). If I do not receive the Bitcoins, I will certainly send out your video recording to all of your contacts including friends and family, colleagues, and so forth. nonetheless, if I receive the payment, I'll destroy the video immediately. If you need proof, reply with "yes!" and I definitely will send your video recording to your 14 friends. It is a non-negotiable one time offer, thus don't ruin my time & yours by responding to this e-mail.

EventStream

[Streams](#) are node's best and most misunderstood idea, and EventStream is a toolkit to make creating and working with streams easy.

Normally, streams are only used for IO, but in event stream we send all kinds of objects down the pipe. If your application's input and output are streams, shouldn't the throughput be a stream too?

The `EventStream` functions resemble the array functions, because Streams are like Arrays, but laid out in time, rather than in memory.

All the `event-stream` functions return instances of `Stream`.

`event-stream` creates [0.8 streams](#), which are compatible with [0.10 streams](#).

NOTE: I shall use the term "*through stream*" to refer to a stream that is writable *and* readable.

NOTE for Gulp users: Merge will not work for gulp 4. [merge-stream](#) should be used.

simple example:

```
//pretty.js

if(!module.parent) {
  var es = require('event-stream')
```

[install](#)

```
> npm i event-stream
```

devinus commented on Jul 31, 2015

...

@dominictarr Interesting. Would you accept a `flatMap` patch using this functionality?

devinus commented on Jul 31, 2015

...

I wonder why `mapSync` uses `emit` rather than `queue`.

dominictarr commented on Jul 31, 2015

Owner

...

@**devinus** ah, it's probably just old. I don't use this module anymore, i now use
<https://github.com/dominictarr/pull-stream>

If you publish a `flatMap` module and then make a pr to include it, i'll merge.

This repository has been archived by the owner. It is now read-only.

WEB APPLICATION SECURITY

“Web application security is a branch of Information Security that deals specifically with security of websites, web applications and web services.”

-WIKIPEDIA

SECURE SOFTWARE DEVELOPMENT LIFE CYCLE

Software Development Life Cycle (SDLC) is a framework that defines the process used by the organisations to build an application from its inception to its decommission

1 PLANNING

Planning focuses on the scope of the project. The outputs of the planning phase include: project plans, schedules, cost estimations, and procurement requirements.

2 REQUIREMENTS

The IT team gathers requirements from business stakeholders and Subject Matter Experts (SMEs.) The output of this phase in a Waterfall project is usually a document that lists these requirements. Agile methods, by contrast, may produce a backlog of tasks to be performed.

4 SOFTWARE DEVELOPMENT

This phase produces the software under development. This could be in "sprints" (Agile), or a single block effort (Waterfall). The output of this phase is testable, functional software.

6 DEPLOYMENT

The deployment phase is, ideally, a highly automated phase. In high-maturity enterprises, this phase is almost invisible; software is deployed the instant it is ready. Enterprises with lower maturity, or in some highly regulated industries, the process involves some manual approvals. The output of this phase is the release to Production of working software.

3 DESIGN AND PROTOTYPING

Once requirements are understood, the design process takes place. It makes use of established patterns for application architecture and software development. Architecture frameworks like TOGAF may be used here. Outputs include: design documents that list the patterns and components selected for the project; code produced by spikes, used as a starting point for development.

5 TESTING

The testing phase of the SDLC is arguably one of the most important. It is impossible to deliver quality software without testing. Methods for testing can include: code quality, unit testing (functional tests), Integration testing, Performance testing, Security testing. The output of the testing phase is functional software, ready for deployment to a production environment.

7 OPERATIONS AND MAINTENANCE

The operations and maintenance phase is the "end of the beginning". Though the SDLC doesn't end here, Software must be monitored constantly to ensure proper operation. Bugs and defects discovered in Production must be reported and responded to, which often feeds work back into the process. Bug fixes may not flow through the entire cycle, however; at least an abbreviated process is necessary to ensure that the fix does not introduce other problems.

A SECURE SDLC PROCESS ENSURES THAT SECURITY ASSURANCE ACTIVITIES SUCH AS PENETRATION TESTING, CODE REVIEW, AND ARCHITECTURE ANALYSIS ARE AN INTEGRAL PART OF THE DEVELOPMENT EFFORT

- .MORE SECURE SOFTWARE AS SECURITY IS A CONTINUOUS CONCERN
- .AWARENESS OF SECURITY CONSIDERATIONS BY STAKEHOLDERS
- .EARLY DETECTION OF FLAWS & COST REDUCTION AS A RESULT OF EARLY DETECTION AND RESOLUTION OF ISSUES

OWASP

OWASP Top 10 - 2017

The Ten Most Critical Web Application Security Risks

OWASP

Application Security Verification Standard 4.0
Final
March 2019

OWASP PRO ACTIVE CONTROLS

- List of security techniques that should be included in every software development project
- Ordered by order of importance

10 Critical Security Areas That Software Developers Must Be Aware Of

PROJECT LEADERS

KATY ANTON
JIM MANICO
JIM BIRD

THE TOP 10 PROACTIVE CONTROLS

- C1: Define Security Requirements
- C2: Leverage Security Frameworks and Libraries
- C3: Secure Database Access
- C4: Encode and Escape Data
- C5: Validate All Inputs
- C6: Implement Digital Identity
- C7: Enforce Access Controls
- C8: Protect Data Everywhere
- C9: Implement Security Logging and Monitoring
- C10: Handle All Errors and Exceptions

C1. DEFINE SECURITY REQUIREMENTS

- Security requirements define new features or additions to existing features to solve a specific security problem or eliminate a potential vulnerability
- Instead of creating a custom approach to security for every application, standard security requirements allow developers to reuse the definition of security controls and best practices
- OWASP ASVS
- User Stories and Abuse Cases

A2:2017-Broken Authentication

Epic:

Attackers have access to hundreds of millions of valid username and password combinations for credential stuffing, default administrative account lists, automated brute force, and dictionary attack tools. Session management attacks are well understood, particularly in relation to unexpired session tokens.

Abuse Case:

As an attacker, I have access to hundreds of millions of valid username and password combinations for credential stuffing.

Abuse Case:

As an attacker, I have default administrative account lists, automated brute force, and dictionary attack tools I use against login areas of the application and support systems.

Abuse Case:

As an attacker, I manipulate session tokens using expired and fake tokens to gain access.

C2. LEVERAGE SECURITY FRAMEWORKS AND LIBRARIES

- Secure coding libraries and software frameworks with embedded security help software developers guard against security-related design and implementation flaws
- A developer writing an application from scratch might not have sufficient knowledge, time, or budget to properly implement or maintain security features

react

React is a JavaScript library for creating user interfaces.

The `react` package contains only the functionality necessary to define React components. It is typically used together with a React renderer like `react-dom` for the web, or `react-native` for the native environments.

Note: by default, React will be in development mode. The development version includes extra warnings about common mistakes, whereas the production version includes extra performance optimizations and strips all error messages. Don't forget to use the `production build` when deploying your application.

Example Usage

```
var React = require('react');
```

Keywords

react

install

```
> npm i react
```

IMPLEMENTING BEST PRACTICES

- Use libraries and frameworks from trusted sources that are actively maintained and widely used by many applications
- Create and maintain an inventory catalog of all the third party libraries and components
- Proactively keep libraries and components up to date

OWASP TOP 10-2017

- The primary aim is to educate developers, designers, architects, managers, and organisations about the consequences of the most common and most important web app security weaknesses

OWASP Top 10 - 2017

The Ten Most Critical Web Application Security Risks

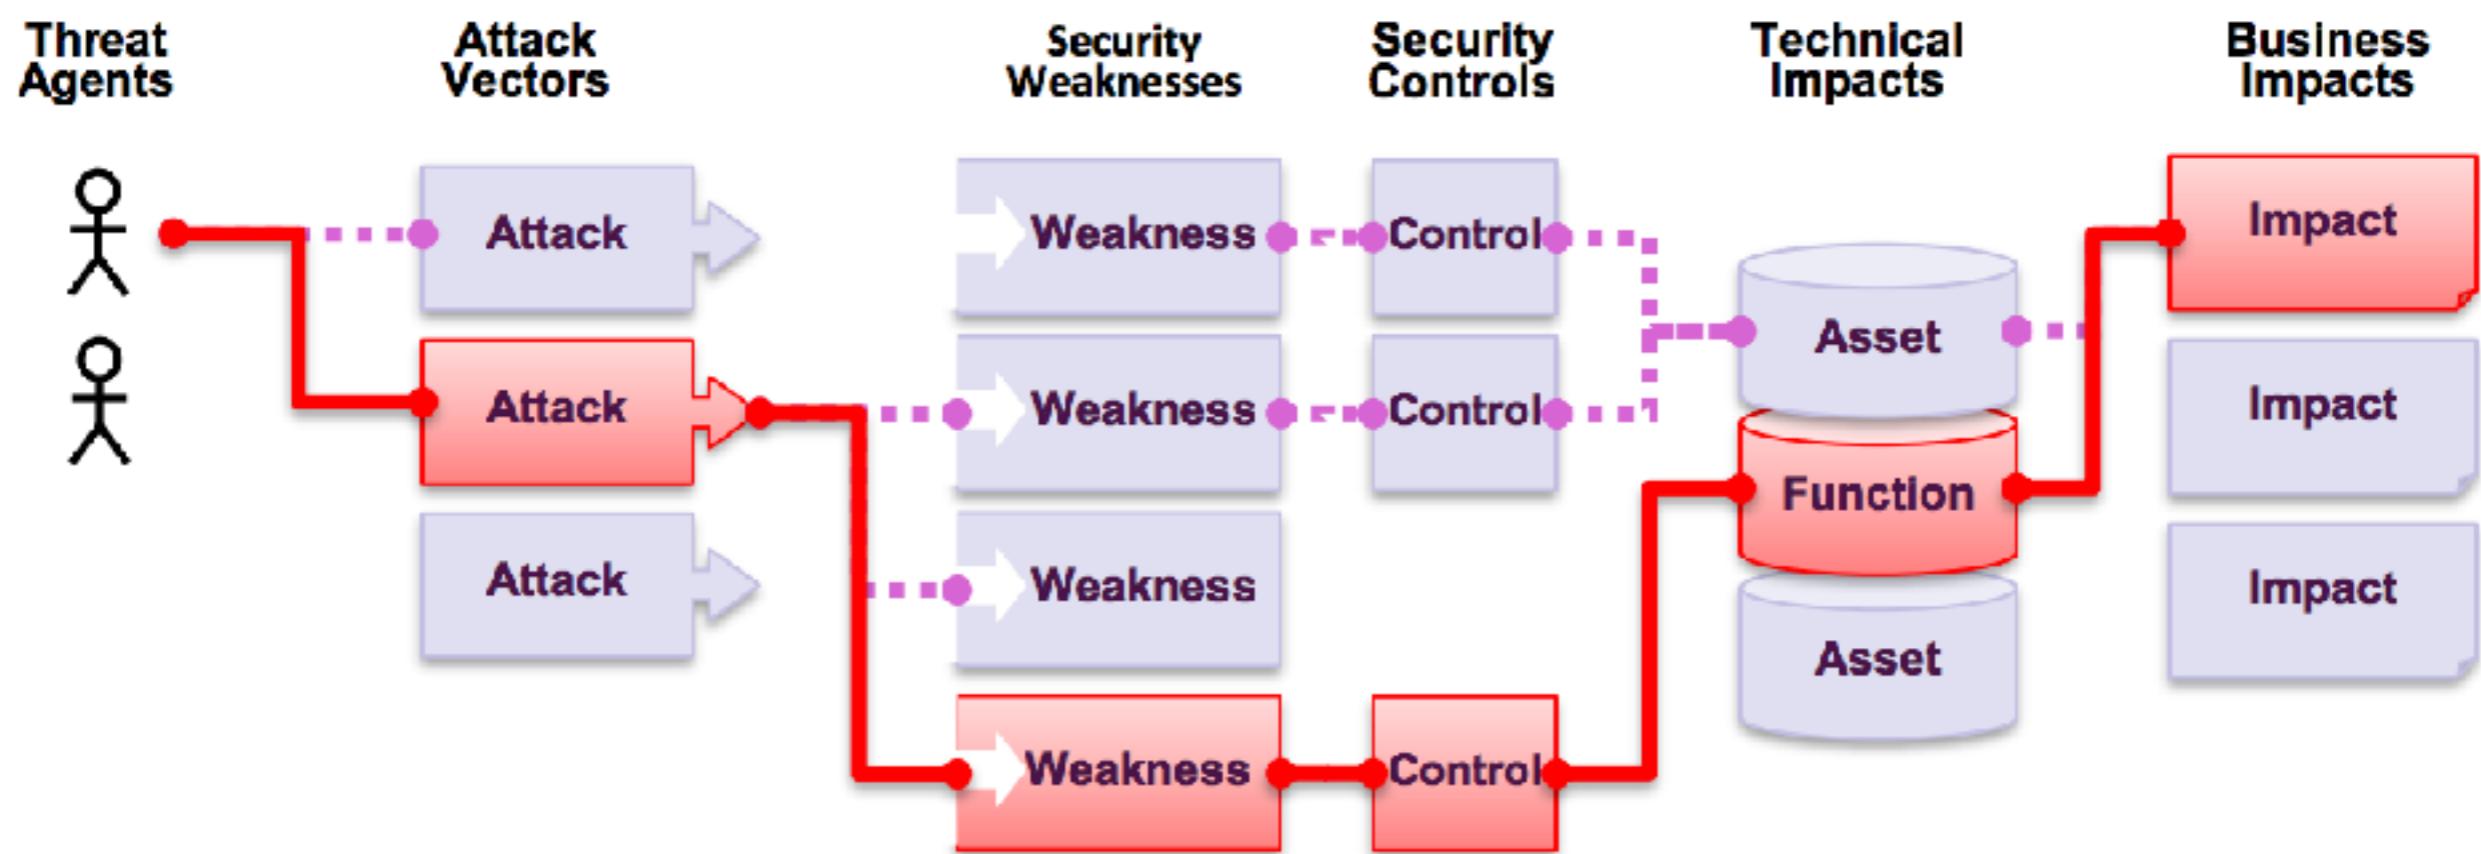

WHAT CHANGED FROM 2013 TO 2017?

OWASP TOP 10

OWASP Top 10 - 2013	→	OWASP Top 10 - 2017
A1 – Injection	→	A1:2017-Injection
A2 – Broken Authentication and Session Management	→	A2:2017-Broken Authentication
A3 – Cross-Site Scripting (XSS)	↓	A3:2017-Sensitive Data Exposure
A4 – Insecure Direct Object References [Merged+A7]	↑	A4:2017-XML External Entities (XXE) [NEW]
A5 – Security Misconfiguration	↙	A5:2017-Broken Access Control [Merged]
A6 – Sensitive Data Exposure	↗	A6:2017-Security Misconfiguration

Code quality

Automate your code review with style, quality, security, and test-coverage checks when you need them.

22 results filtered by Code quality X

codelingo 

Your Code, Your Rules - Automate code reviews with your own best practices

codebeat 

Code review expert on demand. Automated for mobile and web

TestQuality 

Modern, powerful, test plan management

Sider 

Automatically analyze pull request against custom per-project rulesets and best practices

Restyled.io 

Restyle Pull Requests as they're opened

Pull Request Size 

Apply size labels to Pull Requests based on the total lines of code changed

PEP 8 Speaks 

A GitHub app to automatically review Python code style over Pull Requests

LGTM 

Find and prevent zero-days and other critical bugs, with customizable alerts and automated code review

GuardRails 

GuardRails provides continuous security feedback for modern development teams

Datree 

Policy enforcement solution for confident and compliant code

Commit Lint 

Enforce the conventions of commits

CodeScene 

The analysis tool to identify and prioritize technical debt and evaluate your organizational efficiency

Code Climate 

Automated code review for technical debt and test coverage

codebeat 

Code review expert on demand. Automated for mobile and web

Sider 

Automatically analyze pull request against custom per-project rulesets and best practices

Pull Request Size 

Apply size labels to Pull Requests based on the total lines of code changed

Lucidchart Connector 

Insert a public link to a Lucidchart diagram so team members can quickly understand an issue or pull request

ImgBot 

A GitHub app that optimizes your images

GraphQL Inspector 

Compare schemas, validate documents, find breaking changes, find similar types, get schema coverage

Coveralls 

Ensure that new code is fully covered, and see coverage trends emerge. Works with any CI service

Codecov 

Group, merge, archive and compare coverage reports

CodeFactor 

Automated code review for GitHub

Codacy 

Automated code reviews to help developers ship better software, faster

Now supporting GitHub Checks!

You can now see the status of your CircleCI workflows and related jobs all within the GitHub UI. Enable this feature in your CircleCI [organization settings](#) for new and existing accounts.

Build faster. Test more. Fail less.

Let CircleCI help your team focus on making a great product. Speed up your test and delivery cycle and improve productivity, without running your own infrastructure.

[Read more...](#)

The screenshot displays the CircleCI build dashboard for the project "facebook/react-native". The main area shows a list of recent builds, each with a status indicator (e.g., Running, Success, Failed), a build ID, a commit hash, and a duration. The sidebar on the left provides navigation links for "Builds", "My branches", and "Attachments". Below the dashboard, a descriptive text explains the feature, and five smaller screenshots at the bottom show different parts of the CircleCI interface.

Builds > facebook > react-native

Build	ID	Commit	Status	Duration
Running	#18801	pull/18801 #18801	Running	21m 41s

[Support](#)[Documentation](#)[Privacy Policy](#)[Report abuse](#)

AccessLint brings automated web accessibility testing into your development workflow. When a pull request is opened, AccessLint reviews the changes and comments with any new accessibility issues, giving you quick, timely, and targeted feedback, before code goes live.

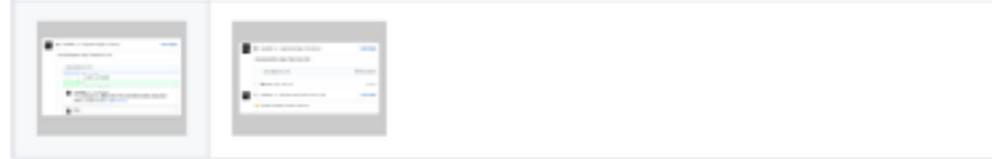

AccessLint helps you keep on target with digital accessibility by giving specific, ongoing accessibility feedback to your team. It can catch simple errors that might break your website for your customers with disabilities.

Accessibility guidelines defined in WCAG 2.0 help us build applications that work better for more people. They also give us a rough measure of compliance with legal requirements outlined in the ADA and Section 508. AccessLint runs a growing list of WCAG 2.0 tests, e.g. missing alt attributes that make pages more opaque for screenreader users, positive tabindex values that can create confusion for keyboard users, invalid ARIA, and unlabelled fields.

Use AccessLint to hold on to the hard-earned progress you've made with accessibility, or to inspire your team to start chipping away at issues. That frees you from costly bug-fixes and remediation, and socializes accessibility to your team. That way you'll have fewer bugs and can focus on delivering features.

When you open a Pull Request, AccessLint works quickly to find accessibility issues in your code, and comments with specific, line-by-line feedback.

```

accesslint bot 23 days ago

This image is missing a text alternative (`alt` attribute). This is a problem for people using screen readers.

Codecov provides highly integrated tools to group, merge, archive and compare coverage reports.

1. Upload coverage reports from your CI builds.
2. Codecov merges all builds and languages into one beautiful coherent report.
3. Get commit statuses, pull request comments and coverage overlay via our browser extension via Sourcegraph.

Are you an enterprise user / desiring an on-premises install? Please out instead to enterprise@codecov.io

Codacy is an automated code analysis/quality tool that helps developers ship better software, faster. With Codacy, you get static analysis, cyclomatic complexity, duplication and code unit test coverage changes in every commit and pull request.

You can use Codacy to enforce your code quality standard, save time in code reviews, enforce security best practices and onboard developers faster. Integrate with your GitHub repositories to get quality analysis of every pull request inside GitHub.

[Read more...](#)

Track your project quality evolution

Get a code quality glance at your project and track its quality evolution over time.

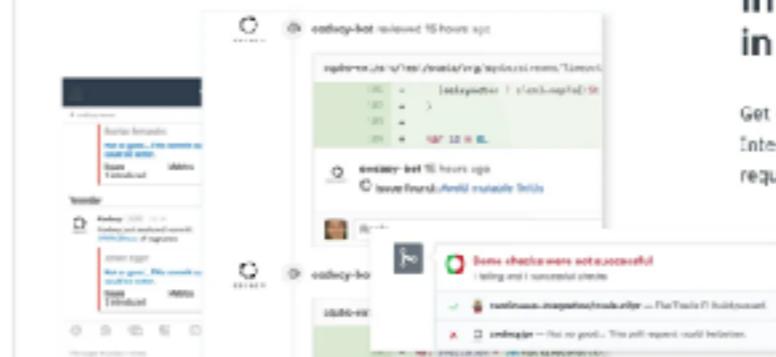

Our dashboard answers three main questions:

What is the state of your projects code quality?
How is it evolving throughout time?
What are the hotspots in my code?

Integrated in your workflow

Get only the updates you need.

Tired of manually scraping your code looking for the smallest issues? Take codebeat for a spin!

codebeat is an automated static code analysis tool supporting multiple languages used by both web and mobile developers worldwide. Now also providing style analysis for projects written in Swift!

We've integrated SwiftLint, the best linter for Swift in our code review app and fixed you with a [help page](#) about the feature. Enjoy!

[Read more...](#)

Check your full stack

codebeat offers unified reporting system across all supported languages. It means that all project stakeholders can easily understand what is happening inside a project.

The screenshot shows the codebeat application interface. At the top, there's a navigation bar with tabs for 'Code Review' and 'Static Analysis'. Below the navigation, a banner reads 'Check your full stack' with a subtext about unified reporting across supported languages. A row of language icons (Swift, Angular, Dart, Python, Ruby, C/C++, JavaScript, TypeScript) is displayed. The main area contains several cards: one for 'Code Review' showing a green status, another for 'Static Analysis' with a green status, and others for 'Continuous Integration' (GitHub CI status), 'Build Status' (green), 'Test Coverage' (green), and 'Dependency Status' (green). At the bottom, there are five smaller cards: 'Build your CI tool', 'Find code smells', 'Run unit tests', 'Merge pull requests', and 'Analyze code'.

← Potentially inconsistent state update

reliability

frameworks/react

Updating the state of a component based on the current value of 'this.state' or 'this.props' may lead to inconsistent component state.

[Read more](#)

[Open in query console](#)

Source root/src/.../filters/**eventDropdownFilter.js**

1 alert

```
↑ 1-117
118
119   toggleMenu = () => {
120     this.setState({ isOpen: !this.state.isOpen }, () =>
121       this.props.closeSiblingFilters(this.props.filterName, this.state.isOpen)
122     )
123   }
124
↓ 125-172
```

Component state update uses potentially inconsistent value.

Source root/src/.../appContext/index.js

1 alert

```
↑ 1-136
137
138   clearFilters = () => {
139     this.setState({
140       ...this.state,
141       filterOpen: null,
142       filters: getInitialFilterState(),
143     })
144   }
145
↓ 146-230
```

Component state update uses potentially inconsistent value.

Updating the state of a component based on the current value of 'this.state' or 'this.props' may lead to inconsistent component state.

Query pack: com.igtm/javascript-queries

Query ID: js/react/inconsistent-state-update

Language: JavaScript

Severity: warning

Tags: reliability, frameworks/react

Displayed by default? Yes. Alerts for this query are visible by default, but can be hidden on a per-project basis. [Learn how.](#)

React component state updates using `setState` may asynchronously update `this.props` and `this.state`, thus it is not safe to use either of the two when calculating the new state passed to `setState`.

Recommendation

Use the callback-based variant of `setState`: instead of calculating the new state directly and passing it to `setState`, pass a callback function that calculates the new state when the update is about to be performed.

Example

The following example uses `setState` to update the `counter` property of `this.state`, relying on the current (potentially stale) value of that property:

```
1  this.setState({
2    counter: this.state.counter + 1
3  });
```

Instead, the callback form of `setState` should be used:

```
1  this.setState(prevState => ({
2    counter: prevState.counter + 1
3  }));
```

References

- React Quick Start: [State and Lifecycle](#).

State and Lifecycle

This page introduces the concept of state and lifecycle in a React component.
You can find a [detailed component API reference here](#).

Consider the ticking clock example from [one of the previous sections](#). In [Rendering Elements](#), we have only learned one way to update the UI. We call `ReactDOM.render()` to change the rendered output:

```
function tick() {
  const element = (
    <div>
      <h1>Hello, world!</h1>
      <h2>It is {new Date().toLocaleTimeString()}</h2>
    </div>
  );
  ReactDOM.render(
    element,
    document.getElementById('root')
  );
}

setInterval(tick, 1000);
```

[Try it on CodePen](#)

In this section, we will learn how to make the `Clock` component truly reusable and encapsulated. It will set up its own timer and update itself every second.

The screenshot shows a GitHub issue page for the repository `whyjustin / WebGoat`. The issue is titled `[DepShield] Vulnerability due to usage of commons-fileupload:commons-fileupload:1.2.2 #105`. It was opened by `sonatype-depshield bot` 6 days ago. The issue body contains a message from DepShield reporting a vulnerability due to the usage of `commons-fileupload:commons-fileupload:1.2.2`. The message lists three CVSS 3.0 vulnerabilities:

- (CVSS 9.8) [CVE-2016-100031] Improper Access Control
- (CVSS 7.5) [CVE-2014-0050] Permissions, Privileges, and Access Controls
- (CVSS 7.5) [CVE-2016-3092] Improper Input: Validation

On the right side of the issue page, there are sections for Assignees (No one assigned), Labels (None yet), Projects (None yet), and Milestones (No milestones).

DepShield Generates GitHub Issues for Known Security Vulnerabilities

[DepShield] (CVSS 7.4) Vulnerability due to usage of lodash.get:4.4.2 #88

 Open

sonatype-depshield bot opened this issue a day ago · 0 comments

sonatype-deps... bot commented a day ago

+ ...

Vulnerabilities

DepShield reports that this application's usage of [lodash.get:4.4.2](#) results in the following vulnerability(s):

- (CVSS 7.4) [CWE-471: Modification of Assumed-Immutable Data \(MAID\)](#)
- (CVSS 6.5) [\[CVE-2018-3721\] lodash node module before 4.17.5 suffers from a Modification of Assumed-Immutabl...](#)

Occurrences

lodash.get:4.4.2 is a transitive dependency introduced by the following direct dependency(s):

- [husky:1.3.1](#)
 - └ [cosmiconfig:5.1.0](#)
 - └ [lodash.get:4.4.2](#)

This is an automated GitHub Issue created by Sonatype DepShield. Details on managing GitHub Apps, including DepShield, are available for personal and organization accounts. Please submit questions or feedback about DepShield to the [Sonatype DepShield Community](#).

Vulnerability

CWE-471: Modification of Assumed-Immutable Data (MAID)

The software does not properly protect an assumed-immutable element from being modified by an attacker.

CVSS Score

7.4: Critical

Prototype Pollution

`lodash`

[Advisory](#)

[Versions](#)

Overview

Versions of `lodash` before 4.17.5 are vulnerable to prototype pollution.

The vulnerable functions are '`defaultsDeep`', '`merge`', and '`mergeWith`' which allow a malicious user to modify the prototype of `Object` via `__proto__` causing the addition or modification of an existing property that will exist on all objects.

Remediation

Update to version 4.17.5 or later.

Snyk is on a mission to help developers use open source and stay secure.

Snyk helps find, fix (and prevent!) known vulnerabilities in your Node.js, Java, Ruby, Python and Scala apps. Snyk is free for open source.

Snyk tracks vulnerabilities in over 800,000 open source packages, and helps protect over 25,000 applications.

83% of Snyk users found vulnerabilities in their applications, and new vulnerabilities are disclosed regularly, putting your application at risk.

[Read more...](#)

The screenshot shows the Snyk web interface with a dark header bar. The header includes the Snyk logo, the company name "Canidae Ltd", a dropdown menu, and links for "Vulnerability DB", "Docs", and "My account". Below the header is a navigation bar with "Dashboard", "Projects", and "Settings". A search bar labeled "Search projects" is followed by a "Add projects" button. The main area displays five project cards:

- canidae/pug**: package.json (5 H, 2 M, 14 L), Gemfile.lock (4 H, 1 M, 1 L). Status: New. Last tested: 1 hour ago.
- flat-coated-retriever**: package.json (0 L, 0 M, 0 L). Status: Test weekly. Last tested: 3 days ago.
- canidae/pyrenean-shepherd**: pom.xml (1 H, 0 M, 1 L). Status: New. Last tested: 5 days ago.
- canidae/anatolian-shepherd**: Gemfile.lock (2 H, 1 M, 7 L). Status: Test weekly. Last tested: 1 week ago.
- canidae/saint-bernard**: No details shown.

A search bar at the bottom left says "Find: Quickly scan all your repos and get a high level overview on the amount of known vulnerabilities". Below the search bar are five small screenshots of different parts of the Snyk interface.

snyk

MEDIUM SEVERITY

🛡 Denial of Service (DoS)

Vulnerable module: [mem](#)

Introduced through: [gatsby@2.1.31](#)

Detailed paths and remediation

- Introduced through: pride-london-web@0.1.0 > gatsby@2.1.31 > @gatsbyjs/relay-compiler@2.0.0-printer-fix.2 > yargs@9.0.1 > os-locale@2.1.0 > mem@1.1.0

Remediation: No remediation path available.

Vulnerable functions

`index.module.exports.memoized()`

`index.module.exports.memoized.setData()`

Overview

[mem](#) is an optimization used to speed up consecutive function calls by caching the result of calls with identical input.

Affected versions of this package are vulnerable to Denial of Service (DoS). Old results were deleted from the cache and could cause a memory leak.

Rollbar provides real-time, full-stack exception reporting and debugging tools for developers. Rollbar integrates in moments with apps built in **JavaScript, Ruby, Python, PHP, Node.js, Android, iOS, Go, Java, .NET** and [more](#).

Rollbar integrates with GitHub to link stack traces to the underlying source code, correlate exceptions to code changes, and create GitHub Issues so teams can manage errors in their existing workflow.

Ensure that Pull Request sizes in your organization are trending smaller with the Pull Request Size app. Each Pull Request created will be marked with a label in GitHub based on the lines of code changed.

Size Determination

The Pull Request labels are applied depending on the total lines of code changed (additions + deletions).

Label	Description
size/XS	Denotes a Pull Request that changes 0-9 lines.
size/S	Denotes a Pull Request that changes 10-29 lines.
size/M	Denotes a Pull Request that changes 30-99 lines.
size/L	Denotes a Pull Request that changes 100-499 lines.
size/XL	Denotes a Pull Request that changes 500-999 lines.
size/XXL	Denotes a Pull Request that changes 1000+ lines.

ONLINE SCAN

Use webhint to improve your website

webhint is a linting tool that will help you with your site's accessibility, speed, security and more, by checking your code for best practices and common errors. Use the online scanner or the CLI to start checking your site for errors.

[TRY THE ONLINE SCANNER](#)[GET STARTED WITH THE CLI](#)

Why use webhint?

FULLY CUSTOMIZABLE

Every site is different. webhint adapts its feedback when you give it more information: [ignore 3rd-party code](#), [prioritize your users' browsers](#), and [control the results](#) with minimal setup.

CREATE YOUR OWN HINTS

With the help of our [contributor guide](#), you can [create new hints](#) to suit your needs. You can help webhint help even more people like you by contributing your hints back!

COMMUNITY DRIVEN

webhint welcomes anyone who wants to make the web a better place. Testing, [filling issues](#) and [feature requests](#), [contributing code](#), and [improving the documentation](#) are just the start!

[USER GUIDE](#)[HINT DOCUMENTATION](#)[WEBHINT GITHUB](#)

[Overview](#)[Scoring Guides](#)[Lighthouse v3 Migration Guide](#)[Audit References](#)[Performance](#)[Progressive Web App](#)[Accessibility](#)[Best Practices](#)[SEO](#)

Lighthouse

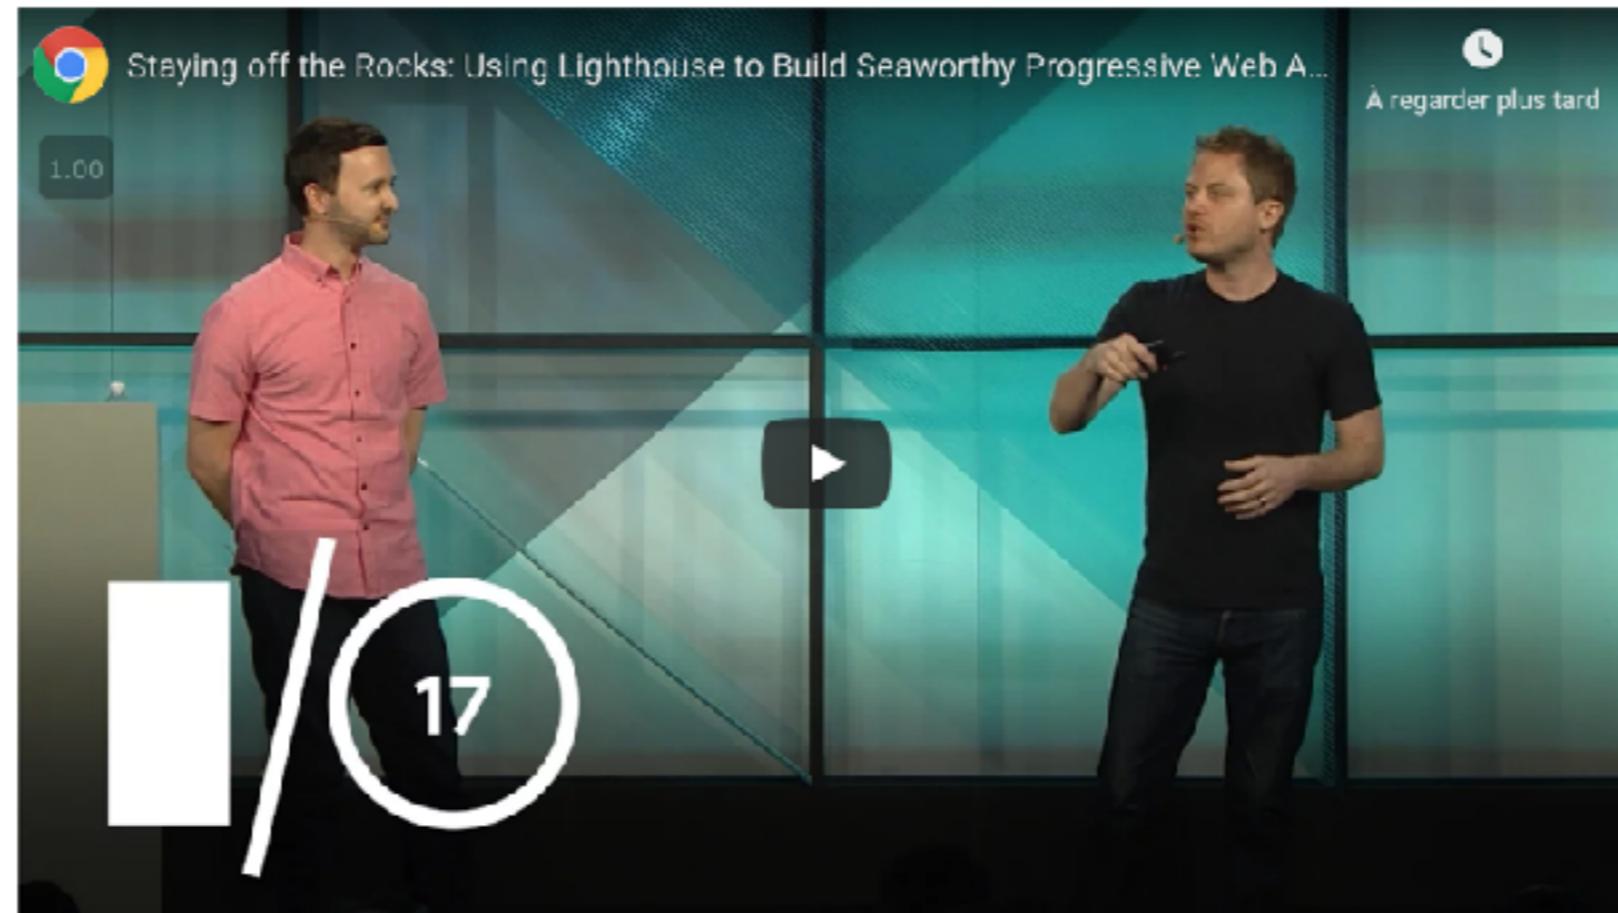

Lighthouse is an [open-source](#), automated tool for improving the quality of web pages. You can run it against any web page, public or requiring authentication. It has audits for performance, accessibility, progressive web apps, and more.

You can run Lighthouse in Chrome DevTools, from the command line, or as a Node module. You give Lighthouse a URL to audit, it runs a series of audits against the page, and then it generates a report on how well the page did. From there, use the failing audits as indicators on how to improve the page. Each audit has a reference doc explaining why the audit is important, as well as how to fix it.

[RUN LIGHTHOUSE IN CHROME DEVTOOLS](#)[FILE AN ISSUE](#)

Check out the video below from Google I/O 2017 to learn more about how to use and contribute to Lighthouse.

[Sommaire](#)[Get started](#)[Run Lighthouse in Chrome DevTools](#)[Install and run the Node command line tool](#)[Run Lighthouse as a Chrome Extension](#)[Share and view reports online](#)[Share reports as JSON](#)[Share reports as GitHub Gists](#)[Contribute to Lighthouse](#)

The screenshot shows the Polymer Project Shop homepage. At the top, there's a navigation bar with a menu icon, the word "SHOP", and a shopping cart icon. Below the header is a large image of a person from behind, wearing a textured jacket. To the right of the image, the text "Men's Outerwear" is displayed, followed by a "SHOP NOW" button.

Audits help you identify and fix common problems that affect your site's performance, accessibility, and user experience. [Learn more](#)

[Perform an audit...](#)

The screenshot shows the Chrome DevTools Audits tab for the URL shop.polymer-project.org at 9/26/2017, 4:59:10 PM. The tab is selected, and the results are displayed below:

Category	Score
Progressive Web App	100
Performance	88
Accessibility	100
Best Practices	85

Progressive Web App
These audits validate the aspects of a Progressive Web App, as specified by the baseline [PWA Checklist](#). 100

- 0 failed audits
- 11 Passed Audits
- Manual checks to verify

Performance
These encapsulate your app's performance. 88

Metrics
These metrics encapsulate your app's performance across a number of dimensions.

WHAT'S NEXT FOR YOU?

BECOME A
SECURITY
CHAMPION!

Security Champions playbook

Identify teams

- Enumerate products and services
- List teams per each product
- Identify Product manager (responsible for product) and team manager (working directly with developers)
- Write down technologies (programming languages) used by each team

Define the role

- Measure current security state among the teams and define security goals you plan to achieve in mid-term (e.g. by using OWASP SAMM)
- Identify the places where champions could help (such as verifying security reviews, raising issues for risks in existing code, conducting automated scans etc.)
- Write down clearly defined roles, as these will be the primary tasks for newly nominated champions to work on

Nominate champions

- Introduce the idea and role descriptions and get approvals on all levels - both from product and engineering managers, as well as from top management
- Together with team leader identify potentially interested candidates
- Officially nominate them as part of your security meta-team

Comm channels

- Make sure to have an easy way to spread information and get feedback
- While differing from company to company, this usually includes chats (Slack/IRC channel, Yammer group, ...) and separate mailing lists
- Set up periodic sync ups - bi-weekly should be fine to start with

Knowledge base

- Build a solid internal security knowledge base, which would become the main source of inspiration for the champions
- It should include security meta-team page with defined roles, secure development best practices, descriptions of risks and vulnerabilities and any other relevant info
- Pay special attention to clear and easy-to-follow checklists, as it's usually the simplest way to get the things going

Maintain interest

- Develop your ways or choose one of the below to keep in touch and maintain the interest of the champions
- Conduct periodic workshops and encourage participation in security conferences
- Share recent appsec news (e.g. Ezine) via communication channels
- Send internal monthly security newsletters with updates, plans and recognitions for the good work
- Create champions corner with security library, conference calendar, and other interesting materials
